3.Choose your service provider to bring in APN settings.

%If your service provider is not in the list, please enter APN settings manually.

4.Enter SIM card phone number and the 4 preset hotline numbers. (You can also change phone numbers in APP.)

*Geo Fence and SOS alert is sent to the 4 preset hotline numbers by SMS (text message). Please make sure you enter the hotline numbers correctly.

SIM card Installation

Cloud-Tracker needs to a GSM SIM card with voice/SMS/data allowance. The service rate depends on your local service provider. Please use the suitable service plan for your need. 1MB data traffic can send 20,000 waypoints.

Install a SIM card

1.Unlock and open the back panel 2. Take the battery out 3.Insert the SIM card

5. The Cloud Tracker will restart automatically with the new settings. You can use Cloud Tracker APP and My Cloud web service to manage Cloud Trackers.

6 Cloud Tracker Privacy Settings

The privacy settings let you set up Allowed users to access Cloud Tracker. You can see the Allowed List or setup White / Black list to block unauthorized users to access Cloud Tracker' s position and status.

1.Manage Allowed List

For a brand new Cloud Tracker, the Allowed List should be empty. It means no one can access this Cloud Tracker. You can also delete unwanted users here. Our server will block those deleted users to access this Cloud Tracker.

%Your PC needs to connect to Internet for privacy settings.

2.Access Settings

You can setup White / Black list in Access Settings for Allowed users.

	Wei List - Black List		
CCESS Contro	st O Enable White List		
APP User	MyCloud User		The contents of List
Any user expect u	sers in the Black List can		Block List
connect with this	Cloud Tracker.		
Taiwan(+886)		Add to List	
Taiwan(+886) Phonenumber:		 Add to List 	

Cloud Tracker default mode is [Black List]. Any user with Tracker device ID can access this Cloud Tracker.

Cloud Tracker APP Installation

1.Download and install Cloud Tracker APP from Google Player https://play.google.com/store/apps/developer?id=JareyMobile

JAREYMOBILE Cloud Tracker is the first GPS Tracker APP using Push Mess age technology to get the real

2.Register an account:

Please use your mobile phone number to register the account. We will use a SMS to verify your account. When the registration is completed, you will be login to the APP main page.

8 Add a Cloud Tracker

1.Go to [Trackers]

2.Touch Cloud Tracker ID card with your smart phone to add this Cloud Tracker.

3.The device ID is in the back of Cloud ID card.

4.If your smart phone does not support NFC, please enter the device ID manually.

5.Edit Cloud Tracker nickname, photo and phone number.

6.Click [Confirm] to finish. You can now use Cloud Tracker APP to access and manage this Cloud Tracker.

Notice for GPS positioning

%Get the position for the first time:

Cloud-Tracker will take a longer time to get GPS signal for the first use. Please place Cloud Tracker at a place without shield to accelerate positioning time. When LED is changed to Green blink, Cloud Tracker gets the GPS signal from satellites.

GPS cold start:

If you power off Cloud Tracker for a while or Cloud Tracker is moved offline for a long distance, Cloud Tracker needs a few minutes to get GPS signal from satellites. The real start time depends on your position and environment.

GPS warm start:

If you power off Cloud Tracker for a short period or it does not move offline for a big distance, Cloud Tracker can get GSP signal around 10 seconds.

How to accelerate GPS positioning:

Please power on Cloud Tracker in an open space, without shield. It can short the time for Cloud Tracker to get GPS signal. If using Cloud Tracker in a building or basement, Cloud Tracker may not get GPS signal.
